

Mary Scanlan Hogan

As an environmental geologist, I have always been passionate about water quality and conservation. I understand the importance of having a healthy watershed system and how it impacts communities within its boundaries. Having properly managed drainage within the watershed has far reaching implications. I would happily give my time to continue to improve the Skokie Consolidated Drainage District.

I graduated from Indiana University with a bachelors of science in geology and a minor and mathematics. I earned my masters of science and geology from Bowling Green State University. I worked as an environmental geologist for Patriot Engineering and environmental in Indianapolis Indiana for seven years before becoming a middle school science teacher, I've spent the last nine years my two children in Lake Bluff.
