

Webinar: ASCE Infrastructure Report Card for Stormwater 2025 Overview

June 17, 2025 | 2-3:30PM (Eastern)

Webinar Overview:

The first American Society of Civil Engineers (ASCE) Infrastructure Report Card™ that included a grade for the stormwater sector was released in March 2021 with a grade of D. This inclusion of stormwater in the Infrastructure Report Card was a major milestone in the stormwater sector as it reflects the rising awareness of stormwater issues and recognition that the stormwater sector has significance on par with other infrastructure sectors. The second Infrastructure Report Card that including a grade for stormwater was released in March 2025 that reinforces the ongoing acknowledgement of the significance of stormwater management in the U.S.

This webinar will bring together stormwater professionals to provide an overview of the 2025 Infrastructure Report Card grade for stormwater. Details will be shared on specific Report Card criteria, such as Funding and Future Need, Operation and Maintenance and Resilience, with on-the-ground experience and information presented to color these aspects of the Report Card.

This event is co-hosted by the National Municipal Stormwater Alliance (NMSA) and ASCE. 1.5 PDHs will be awarded for attending this webinar.

For information on the Report Card grade for stormwater, go to:
<https://infrastructurereportcard.org/cat-item/stormwater-infrastructure/>.
