

SUSTAINABILITY

Community Solar

Community Solar programs support the development of **clean, safe renewable electricity generation within your community**. Participating guarantees a fixed discount on your existing electric bills, reducing your total energy spend. There is no impact on your physical building or your existing supply agreement.

Over 20 states and the District of Columbia have active Community Solar programs or Community Solar-enabling legislation passed.

Community Solar is a low-risk way to reduce electricity costs while supporting sustainability efforts in your community. **Enroll in a program today!**

Solar In Your Area

Solar Farms are funded by state programs that incentivize the development of clean, safe renewable electricity generation.

This electricity is generated and delivered to the utility grid.

ENERGY ➔

Your Utility Area

You receive electricity from the grid how you always do – either through the utility or through a third-party supplier.

By signing up to participate with a CS provider, you receive a credit on your utility bill based on electricity generated that month.

CREDITS ➔

Your Organization

You receive ~10% of the utility bill credit for participating in CS, reducing your total energy spend.

The CS provider recoups their development costs with your payments into the program as well as selling Renewable Energy Certificates (RECs).
