

Renewable Energy Credits (RECs)

Achieve fast progress toward your sustainability goals

Renewable Energy Credits (RECs) are a fast and simple way to make real progress toward your sustainability goals. RECs are certificates that represent the environmental impact of one megawatt-hour (MWh) of renewable energy generation.

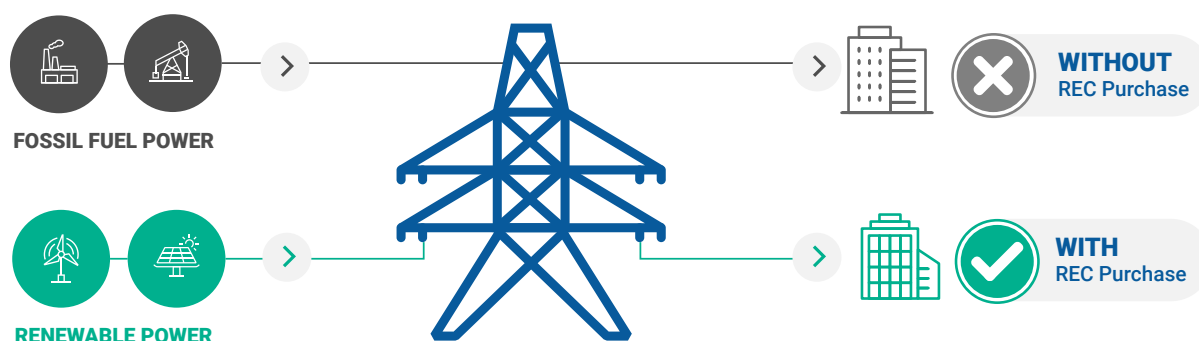

When purchased alongside energy, RECs guarantee that equivalent energy was produced using renewable sources and added to the electricity grid. You can purchase RECs as a fixed number or percentage of your electricity consumption.

Simple way to offset conventional energy usage

Can be purchased as a stand-alone solution or bundled with your retail energy supply

How do RECs work?

- 1 A REC serves as an important tracker of renewable generation on the grid and assigns direct ownership for that renewable electricity.
- 2 At the time of purchase, you will select a specific quantity or a percentage of your energy use that will be offset with renewable energy credits.

- 3 Post purchase, we will present you with:

A certificate to mark your renewable energy purchase.

An annual product content label that describes the specific makeup of the REC purchased and retired on your behalf.

directenergybusiness.com/renewables

Product benefits:

Proceed confidently knowing that RECs from Direct Energy Renewable Services are Green-e® certified

Can be purchased as a stand-alone solution or bundled with your retail energy supply

Choose the renewable energy technology type, project and region
