

APPENDIX A:

- Lake County Public Works will provide a reduced Septage Disposal Rate to septic tank haulers that discharge to the Mill Creek Water Reclamation Facility for septic tank disposal costs to those properties impacted by the April 2013 flood event, as identified in 2013 flood event property impact maps or as otherwise verified by an on-site inspection. From May 14, 2013 through June 1, 2013 the Septage Decant rate may be utilized for septage disposal to flood-impacted homes to help defray cost to homeowners.
- Lake County Planning, Building and Development will waive all permit fees associated with repair work to structures in the unincorporated area necessitated by direct damage from flood waters, as identified in 2013 flood event property impact maps or as otherwise verified by an on-site inspection, from a period of May 14, 2013 to August 1, 2013. On a case-by-case basis, the Planning, Building and Development Department Director may grant an extension of this fee waiver deadline to individual property owners upon demonstration of exigent circumstances including but not limited to a verified delay in insurance claim approval.
