

# Kimberly Elliott

Health Policy Researcher - Chair - Department of Health Services Administration Rosalind Franklin University of Medicine

---

## Summary

I am interested in adding my knowledge of healthcare reform policies to a health policy organization's research agenda. I have experience in conducting both quantitative as well as qualitative research. My qualitative research experience includes conducting focus group exercises with Medicaid recipients at community centers around north Florida. I also have an extensive knowledge of children's health policy due to my dissertation work on the health outcomes for children with special healthcare needs. While I am a young and less experienced researcher, I believe that this gives me a broader scope of interest and thus I can provide an enthusiastic and fresh view to any research team. My knowledge of SAS and STATA as well as my experience with large and complex administrative datasets makes me a useful asset to any analytical project.

Special interests:

Child health policy

Medicaid reform

Health outcomes

Social Epidemiology

---

## Experience

Assistant Professor at Rosalind Franklin University

October 2014 - Present

Graduate Research Assistant

August 2007 - August 2012 (5 years 1 month)

Florida Medicaid Reform

Children with Special Healthcare Needs Policy

Health Policy

---
