CRINGHOUSE International Control of the Control of the Control of the Control of Control	UDS Table 6B Quality of Care Measures Green=Improvement from Previous Year. Red=Regression from Previous Year.	2019 National	2019 Illinois	LCHD 2018	LCHD 2019	LCHD 2020
MEASURE Precentage of children 2 years of age who received age appropriate vaccines by the Cancer Screening MEASURE Precentage of women 51-73 years of age who were screened for cervical scancer Screening MEASURE Precentage of women 51-73 years of age who were screened for cervical scancer Screening MEASURE Precentage of women 51-73 years of age who had a mammogram to screen for breakst Cancer Screening MEASURE Precentage of women 51-73 years of age who had a mammogram to screen for breakst cancer with the control of the contr		Average	Average			
General Canner Screening MEASURE Precruitage of women 32-36 years of age who were screened for cervical cancer freases Canner Screening MEASURE Precruitage of women 51-73 years of age who had a mammogram to screen for Interest cancer MEASURE Precruitage of women 51-73 years of age who had a mammogram to screen for Interest cancer Weight Assessment and Counseling. The World of the Weight Assessment and Evaluation and Adolescents The World of the Weight Assessment and Counseling. The World of the Weight Assessment and Evaluation and The Weight Assessment and Counseling. The World of the Weight Assessment and Counseling. The Weight Assessment and Counseling Interest the Weight Assessment Assessment Assessment Assessment Assessment Assessment Counseling Interest the Cardiovascular Disease MEASURE Precruitage of patients 18 years of age and older with a diagnosis of Wild Disease Counseling Interest the Weight Assessment Assessment Assessment Counseling Interest the Cardiovascular Disease MEASURE Precruitage of patients 18 years of age and older with a diagnosis of Wild Disease Counseling Interest the Weight Assessment Assessment Counseling Interest the Cardiovascular Disease MEASURE Precruitage of patients 18 years of age and older with a diagnosis of Wild Disease Counseling Interest the Weight Assessment Assessment Counseling Interest the Weight Assessment Counseling Interest The Weight Assessment Counseling Interest The Weight Assess	MEASURE: Percentage of children 2 years of age who received age appropriate vaccines by	39.8%	34.8%	32.7%	33.5%	37.5%
MEASURE Percentage of women 23-64 years of age who were screened for cervical cancer Breast Cancer Screening MEASURE Percentage of women 51-73 years of age who had a mammogram to screen for Nun Na	,					
MEASURE. Percentage of women 53-73 years of age who had a mammogram to screen for breast cancer MEASURE. Percentage of open 63-73 years of age who had a mammogram to screen for breast cancer MEASURE. Percentage of patients 3-17 years of age with a BMI) percentile and counseling for MEASURE. Percentage of patients 3-17 years of age with a BMI) percentile and counseling on mutrition and physical activity documented MEASURE. Percentage of patients 13 years of age and older with (1) BMI documented and (2) follow-up plan documented if BMI is outside normal parameters Preventive Care and Screening. Tobacco Use: Screening and Cessation Intervention MEASURE. Percentage of patients and 38 years of age and older who (1) were screened for tobacco use one or more times within 24 months, and (2) if identified to be a tobacco use received escando counseling intervention and the screening of the prevention and Treatment of Cardiovascular Disease MEASURE. Percentage of patients age was of age and older who (1) were screened for tobacco use one or more times within 24 months, and (2) if identified to be a tobacco use one or more times within 24 months, and (2) if identified to be a tobacco use of the Prevention and Treatment of Cardiovascular Disease MEASURE. Percentage of patients 12 years of age and older with a disgnosis of IVD or AMI. MEASURE. Percentage of patients 12 years of age and older with a disgnosis of IVD or AMI. MEASURE. Percentage of patients 12 years of age and before with a disgnosis of IVD or AMI. MEASURE. Percentage of patients 15 years of age and before with a patient of the preventing of patients 12 years of age and older with a disgnosis of IVD or AMI. MEASURE. Percentage of patients 15 years of age and older with a disgnosis of IVD or AMI. MEASURE. Percentage of patients 15 years of age and older with a disgnosis or IVD or AMI. MEASURE. Percentage of patients 15 years of age and older with a disgnosis or IVD or AMI. MEASURE. Percentage of patients 11 years of age and older with an average o	<u> </u>					
MASAURE Precentage of success 13 years of age who had a mammogram to screen for INA NA N	cancer	56.5%	62.7%	68.5%	71.8%	68.8%
breast cancer MA NA					1	
MEASURE: Percentage of patients 13 years of age and older with (1) Meri occurrent on the Assamble of the Assam	breast cancer	NA	NA	NA	NA	39.6%
MEASURE: Percentage of patients 3-17 years of age with a BMI percentile and counseling on unutrition and physical activity documented Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan MEASURE: Percentage of patients 18 years of age and older with (1) BMI documented and (2) (2) (ollow-up plan documented if BMI is outside normal parameters Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention MEASURE: Percentage of patients aged 18 years of age and older who (1) were screened for tobacco use one or more times within 24 months, and (2) if identified to be a tobacco use one or more times within 24 months, and (2) if identified to be a tobacco use one or more times within 24 months, and (2) if identified to be a tobacco user received cessation courseling intervention. MEASURE: Percentage of patients 21 years of age and older who (1) were screened for tobacco use one or more times within 24 months, and (2) if identified to be a tobacco. MEASURE: Percentage of patients 21 years of age and older with a diagnosis of NEZOV with were precibed a station threapy to with a diagnosis of NEZOV with were precibed as total methrapy inchmic Vascular Disease (IVD): Use of Aspirin or Another Antipitated MEASURE: Percentage of patients (2) years of age and older with diagnosis of IVD or AMI. CAGG, or PCI procedure with aspirin or another antipitatedet. COINCIANT OF CAGGO AND						
Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan MEASURE: Percentage of patients 18 years of age and older with (1) BMI documented and (2) follow-up plan documented if BMI is outside normal parameters Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention MEASURE: Percentage of patients aged 18 years of age and older who (1) were screened for tobacco use or or more times within 24 months, and (2) if identified to be a tobacco user received cessation counseling intervention Statin Therapy for the Prevention and Treatment of Cardiovascular Disease MEASURE: Percentage of patients 21 years of age and older with a diagnosis of ASCVD who were prescribed a statu therapy Individual of ASCVD who were prescribed as tatu therapy Individual of ASCVD who were prescribed as tatu therapy Individual of ASCVD who were prescribed as tatu therapy Individual of ASCVD who were prescribed as tatu therapy Individual of ASCVD who were prescribed as tatu therapy Individual of ASCVD who were prescribed as tatu therapy Individual of ASCVD who were prescribed as tatu therapy Individual of ASCVD who were prescribed as tatu therapy Individual of ASCVD who were prescribed as tatu therapy Individual of ASCVD who were prescribed as tatu therapy Individual of ASCVD who were targed of patients 50 through 75 years of age who had appropriate Individual of ASCVD who were targed of patients whose first ever HIV diagnosis was made by health contents staff within 90 days (30 days in 2020) of that first-ever diagnosis Individual of ASCVD who were targed of patients whose first ever HIV diagnosis was made by health contents staff within 90 days (30 days in 2020) of that first-ever diagnosis Individual of ASCVD who were targed of patients and ASCVD who were targed of	MEASURE: Percentage of patients 3–17 years of age with a BMI percentile and counseling	71.2%	78.9%	48.5%	51.4%	51.2%
MEASURE: Percentage of patients 18 years of age and older with (1) BMI documented and (2) follow-up plan documented if BMI is outside normal parameters 72.4% 77.4% 85.2% 88.9% 87.5% Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention MEASURE: Percentage of patients aged 18 years of age and older who (1) were screened for tobacco use one or more times within 24 months, and (2) if identified to be a tobacco 87.2% 89.2% 75.3% 82.3% 83.6% user received descation counseling intervention MEASURE: Percentage of patients; 2 years of age and older with a diagnosis of ASCVD who were prescribed a statin therapy Statin Therapy for the Prevention and Treatment of Cardiovascular Disease MEASURE: Percentage of patients; 19 years of age and older with a diagnosis of IVD or AMI, 80.8% 85.2% 84.8% 88.1% 82.9% CABG, or PCI procedure with aspirin or another antiplatelet Colorectal Cancer Screening MEASURE: Percentage of patients; 50 through 75 years of age who had appropriate screening for colorectal cancer MEASURE: Percentage of patients; 50 through 75 years of age who had appropriate screening for colorectal cancer MEASURE: Percentage of patients; 50 through 75 years of age who had appropriate screening for colorectal cancer MEASURE: Percentage of patients whose first ever HIV diagnosis was made by health center staff within 90 days; (30 days in 2020) of that first-ever diagnosis. MEASURE: Percentage of patients whose first ever HIV diagnosis was made by health center staff within 90 days; (30 days in 2020) of that first-ever diagnosis was made by health center staff within 90 days; (30 days in 2020) of that first-ever diagnosis was made by health center staff within 90 days; (30 days in 2020) of that first-ever diagnosis was made by health center staff within 90 days; (30 days in 2020) of that first-ever diagnosis was made by health center staff within 90 days; (30 days in 2020) of that first-ever diagnosis was made by health center staff within 90 days; (30 days in 2020) of that first-e		n				
(2) follow-up plan documented if BMI is outside normal parameters 72.4%, 77.4%, 85.2%, 88.9%, 87.5% Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention MEASURE: Percentage of patients aged 18 years of age and older who (1) were screened for tobacco use one or more times within 24 months, and (2) if identified to be a tobacco 87.2%, 89.2%, 75.3%, 82.3%, 83.6%, 83.6% user received execution counseling intervention MEASURE: Percentage of patients; 12 years of age and older with a diagnosis of ASCVO who were prescribed a statin therapy 88.1%, 80.8%, 85.2%, 84.8%, 88.1%, 82.9% 88.2%, 75.3%, 82.3%, 83.6%, 83.6% 88.1%, 80.8%, 85.2%, 84.8%, 88.1%, 82.9% 88.2%, 75.3%, 82.3%, 83.6%, 83.6% 88.1%, 80.8%, 85.2%, 84.8%, 88.1%, 82.9% 88.2%, 86.2%, 86.2%, 86.2%, 86.2%, 86.2%, 86.2% 88.2%, 86.	Freventive Care and Screening. Body mass index (BMI) Screening and Follow-Op Fra	I				
Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention MEASURE: Percentage of patients aged 18 years of age and older who (1) were screened for tobacco use on more times within 24 months, and (2) if identified to be a tobacco sizer received cessation counseling intervention MEASURE: Percentage of patients 21 years of age and older with a diagnosis of ASCVD who were prescribed a statin therapy with a diagnosis of ASCVD who were prescribed a statin therapy with a diagnosis of ASCVD who were prescribed a statin therapy with a diagnosis of ASCVD who were prescribed a statin therapy with a diagnosis of ASCVD who were prescribed a statin therapy with a diagnosis of ASCVD who were prescribed a statin therapy with a diagnosis of ASCVD who were prescribed a statin therapy with a diagnosis of ASCVD who were prescribed a statin therapy with a diagnosis of ASCVD who were prescribed a statin therapy with a diagnosis of IVD or AMI. MEASURE: Percentage of patients 18 years of age and older with a diagnosis of IVD or AMI. CaBC, or PCI procedure with aspirin or another antiplatelet Colorectal Cancer Screening MEASURE: Percentage of patients 50 through 75 years of age who had appropriate screening for colorectal cancer 45.6% 45.6% 24.4% 33.5% 33.0% MEASURE: Percentage of patients whose first ever HIV diagnosis was made by health center staff within 90 days (30 days in 2020) of that first-ever diagnosis MEASURE: Percentage of patients 15 through 65 years of age who were tested for HIV NA N	MEASURE: Percentage of patients 18 years of age and older with (1) BMI documented and (2) follow-up plan documented if BMI is outside normal parameters	72.4%	77.4%	85.2%	88.9%	87.5%
MEASURE: Percentage of patients aged 18 years of age and older who (1) were screened for tobacco use one or more times within 24 months, and (2) if identified to be a tobacco size or received essation counseling intervention of the prevention and Treatment of Cardiovascular Disease MEASURE: Percentage of patients 21 years of age and older with a diagnosis of ASCVD who were prescribed a statin therapy stocked in the diagnosis of ASCVD who were prescribed a statin therapy stocked in the diagnosis of ASCVD who were prescribed a statin therapy stocked in the diagnosis of ASCVD who were prescribed a statin therapy stocked in the diagnosis of ASCVD who were prescribed a statin therapy stocked in the diagnosis of ASCVD who were prescribed a statin therapy stocked in the diagnosis of ASCVD who were prescribed a statin therapy stocked in the diagnosis of IVD or AMI, and all all all all all all all all all al						
for tobacco use one or more times within 24 months, and (2) if identified to be a tobacco use received escaption counseling intervention Statin Therapy for the Prevention and Treatment of Cardiovascular Disease MEASURE: Percentage of patients 21 years of age and older with a diagnosis of ASCVD who were prescribed as tatin therapy Ischemic Vascular Disease (IVD): Use of Aspirin or Another Antiplatelet MEASURE: Percentage of patients 18 years of age and older with a diagnosis of IVD or AMI, CAGG, or PCI procedure with aspirin or another antiplatelet MEASURE: Percentage of patients 19 years of age who had appropriate screening for colorectal cancer MEASURE: Percentage of patients 50 through 75 years of age who had appropriate screening for colorectal cancer MEASURE: Percentage of patients whose first ever HIV diagnosis was made by health who days (30 days in 2020) of that first-ever diagnosis MEASURE: Percentage of patients 51 through 65 years of age who were tested for HIV when within age range MEASURE: Percentage of patients 15 through 65 years of age who were tested for HIV when within age range MEASURE: Percentage of patients 15 through 65 years of age and older who were (1) screened for depression with a standardized tool and, if screening was positive, (2) had a follow-up plan documented Depression Remission at Twelve Months MEASURE: Percentage of patients 12 years of age and older with major depression or dysthymia who reached remission 12 months (+/- 60 days) after an index event Dental Sealants for Children between 6-9 Years MEASURE: Percentage of patients 12 through 59 years of age at moderate to high risk of caries who received a sealant on a first permanent molar Use of Appropriate Medications for Asthma MEASURE: Percentage of patients 51 through 59 years of age identified as having persistent weight was below normal (less than 2,500 grams) as a manual persistent and whose blood pressure was adequately controlled (less than 140/90 minulg) during the measurement period. MEASURE: Percent						
Statin Therapy for the Prevention and Treatment of Cardiovascular Disease MEASURE: Percentage of patients 21 years of age and older with adjagnosis of ASCVO who were prescribed a statin therapy is statin Therapy for the Prevention and Treatment of Cardiovascular Disease (VD): Use of Aspirin or Another Antiplatelet MEASURE: Percentage of patients 18 years of age and older with a diagnosis of IVD or AMI, CABG, or PCI procedure with aspirin or another antiplatelet MEASURE: Percentage of patients 18 years of age and older with a diagnosis of IVD or AMI, CABG, or PCI procedure with aspirin or another antiplatelet MEASURE: Percentage of patients 50 through 75 years of age who had appropriate screening for colorectal cancer HIV Linkage to Care MEASURE: Percentage of patients 50 through 75 years of age who had appropriate screening for colorectal cancer HIV Linkage to Care MEASURE: Percentage of patients whose first ever HIV diagnosis was made by health center staff within 90 days (30 days in 2020) of that first-ever diagnosis HIV Screening MEASURE: Percentage of patients 15 through 65 years of age who were tested for HIV when within age range Preventive Care and Screening: Screening for Depression and Follow-Up Plan MEASURE: Percentage of patients 12 years of age and older who were (1) screened for depression with a standardized tool and, if screening was positive, (2) had a follow-up plan documented Depression Remission at Twelve Months MEASURE: Percentage of patients 12 years of age and older with major depression or dystythymia who reached remission 12 months (4/- 60 days) after an index event Dental Scalants for Children between 6-9 Years MEASURE: Percentage of patients 15 through 64 years of age at moderate to high risk of caries who reverbed a sealant on a first permanent molar Use of Appropriate Medications for Astima MEASURE: Percentage of patients 5 through 64 years of age identified as having persistent and were appropriately ordered medications MEASURE: Percentage of patients 5 through 64		07.20/	00.30/	75 20/	02.20/	02.5%
Statin Therapy for the Prevention and Treatment of Cardiovascular Disease MEASURE: Percentage of patients 21 years of age and older with a diagnosis of ASCVD who were prescribed a statin therapy Ischemic Vascular Disease (IVD): Use of Asplrin or Another Antiplatelet MEASURE: Percentage of patients 18 years of age and older with a diagnosis of IVD or AMI, CABG, or PCI procedure with aspirin or another antiplatelet Colorectal Cancer Screening MEASURE: Percentage of patients 50 through 75 years of age who had appropriate Screening for colorectal cancer 45.6%		87.2%	89.2%	75.3%	82.3%	83.6%
MEASURE: Percentage of patients 12 years of age and older with a diagnosis of ASCVD who were prescribed a statin therapy schemic Vascular Disease (VD): Use of Asptrin or Another Antiplatelet MEASURE: Percentage of patients 18 years of age and older with a diagnosis of IVD or AMI, Canage of Patients 18 years of age and older with a diagnosis of IVD or AMI, Canage of Patients 18 years of age and older with a diagnosis of IVD or AMI, Canage of Patients 18 years of age and older with a diagnosis of IVD or AMI, Canage of Patients 50 through 75 years of age who had appropriate screening for Colorectal Cancer Screening of Colorectal Cancer Screening of Colorectal Cancer Screening of Colorectal Cancer Within 90 days (30) days in 2020) of that first-ever diagnosis MEASURE: Percentage of patients whose first ever HIV diagnosis was made by health center staff within 90 days (30) days in 2020) of that first-ever diagnosis HIV Screening MEASURE: Percentage of patients 15 through 65 years of age who were tested for HIV when within age range Perventive Care and Screening: Screening for Depression and Follow-Up Plan MEASURE: Percentage of patients 12 years of age and older with was positive, (2) had a follow-up plan documented MEASURE: Percentage of patients 12 years of age and older with major depression or depression with a standardized tool and, if screening was positive, (2) had a follow-up plan documented Depression Remission at Twelve Months MEASURE: Percentage of patients 12 years of age and older with major depression or dysthymina who reached remission 12 months (+/- 60 days) after an index event Depression Remission at Twelve Months MEASURE: Percentage of patients 12 years of age and older with major depression or dysthymina who reached remission 12 months (+/- 60 days) after an index event Depression Remission at Twelve Months MEASURE: Percentage of patients 18 through 9 years of age at moderate to high risk of acries who received a sealant on a first permanent molar Use of Appropriate Medications for						
with a diagnosis of ASCVD who were prescribed a statin therapy. Ischemic Vascular Disease (IVD): Use of Aspirin or Another Antiplatelet MEASURE: Percentage of patients 18 years of age and older with a diagnosis of IVD or AMI, CABG, or PCI procedure with aspirin or another antiplatelet MEASURE: Percentage of patients 50 through 75 years of age who had appropriate screening for colorectal cancer HIV Linkage to Care MEASURE: Percentage of patients whose first ever HIV diagnosis was made by health center staff within 90 days (30 days in 2020) of that first-ever diagnosis HIV Screening MEASURE: Percentage of patients 15 through 65 years of age who were tested for HIV NA						
Ischemic Vascular Disease (IVD): Use of Aspirin or Another Antiplatelet MEASURE: Percentage of patients 18 years of age and older with a diagnosis of IVD or AMI, CAB, CP PCI PORTOCOMER WITHOUT AMIDIATED AND AND AND AND AND AND AND AND AND AN		70.1%	70.3%	NA	58.1%	63.1%
MEASURE: Percentage of patients 18 years of age and older with a diagnosis of IVD or AMI, CABG, or PCI procedure with aspirin or another antiplatelet Colorectal Cancer Screening MEASURE: Percentage of patients 50 through 75 years of age who had appropriate screening for colorectal cancer HIV Linkage to Care MEASURE: Percentage of patients whose first ever HIV diagnosis was made by health center staff within 90 days (30 days in 2020) of that first-ever diagnosis MEASURE: Percentage of patients whose first ever HIV diagnosis was made by health center staff within 90 days (30 days in 2020) of that first-ever diagnosis MEASURE: Percentage of patients 15 through 65 years of age who were tested for HIV when within age range MEASURE: Percentage of patients 15 through 65 years of age who were tested for HIV when within age range Preventive Care and Screening: Screening for Depression and Follow-Up Plan MEASURE: Percentage of patients 12 years of age and older who were (1) screened for depression with a standardized tool and, if screening was positive, (2) had a follow-up plan documented Depression Remission at Twelve Months MEASURE: Percentage of children between 6-9 Years MEASURE: Percentage of children between 6-9 Years MEASURE: Percentage of children between 6-9 Years MEASURE: Percentage of children between 6-9 Years of age at moderate to high risk of carles who received a sealant on a first permanent molar Use of Appropriate Medications for Asthma MEASURE: Percentage of patients 12 years of age at moderate to high risk of carles who received a sealant on a first permanent molar Use of Appropriate Medications for Asthma MEASURE: Percentage of patients 5 through 64 years of age identified as having persistent asthma and were appropriately ordered medication MEASURE: Percentage of patients 18 through 85 years of age who had a diagnosis of hypertension and whose blood pressure was adequately controlled (less than 140/90 MeASURE: Percentage of patients 18 through 85 years of age who had a diagnosis of h					<u> </u>	
CABG, or PCI procedure with aspirin or another antiplatelet 80.8% 85.2% 84.8% 88.1% 82.9% REASH. Secretal Cancer Screening MEASURE: Percentage of patients 50 through 75 years of age who had appropriate screening for colorectal cancer MEASURE: Percentage of patients whose first ever HIV diagnosis was made by health center staff within 90 days (30 days in 2020) of that first-ever diagnosis HIV Screening MEASURE: Percentage of patients 15 through 65 years of age who were tested for HIV NA						
MEASURE: Percentage of patients 50 through 75 years of age who had appropriate screening for colorectal cancer MEASURE: Percentage of patients whose first ever HIV diagnosis was made by health center staff within 90 days (30 days in 2020) of that first-ever diagnosis MEASURE: Percentage of patients whose first ever HIV diagnosis was made by health center staff within 90 days (30 days in 2020) of that first-ever diagnosis MEASURE: Percentage of patients 15 through 65 years of age who were tested for HIV who when within age range MEASURE: Percentage of patients 15 through 65 years of age and older who were (1) screened for depression with a standardized tool and, if screening was positive, (2) had a follow-up plan documented Depression Remission at Twelve Months MEASURE: Percentage of patients 12 years of age and older with major depression or dysthymia who reached remission 12 months (+/- 60 days) after an index event MEASURE: Percentage of children between 6-9 Years MEASURE: Percentage of children 6 through 9 years of age at moderate to high risk of caries who reached remission 12 months (+/- 60 days) after an index event Dental Sealants for Children between 6-9 Years MEASURE: Percentage of patients 15 permanent molar Use of Appropriate Medications for Astima MEASURE: Percentage of patients 5 through 64 years of age identified as having persistent asthma and were appropriately ordered medication MEASURE: Percentage of patients 5 through 84 years of age identified as having persistent asthma and were appropriately ordered medication MEASURE: Percentage of patients 18 through 85 years of age who had a diagnosis of hypertension MEASURE: Percentage of patients 18 through 75 years of age who had a diagnosis of hypertension and whose blood pressure was adequately controlled (less than 140/90 MEASURE: Percentage of patients 18 through 75 years of age with diabetes who had hemoglobin A1c (HbA1c) greater than 9.0 percent or patients without a test during the 32.0% 32.9% 34.7% 34.8%		80.8%	85.2%	84.8%	88.1%	82.9%
MEASURE: Percentage of patients 50 through 75 years of age who had appropriate screening for colorectal cancer HIV Linkage to Care MEASURE: Percentage of patients whose first ever HIV diagnosis was made by health enter thin 90 days (30 days in 2020) of that first-ever diagnosis MEASURE: Percentage of patients whose first ever HIV diagnosis was made by health enter thin 90 days (30 days in 2020) of that first-ever diagnosis MEASURE: Percentage of patients 15 through 65 years of age who were tested for HIV who within age range Preventive Care and Screening: Screening for Depression and Follow-Up Plan MEASURE: Percentage of patients 12 years of age and older who were (1) screened for depression with a standardized tool and, if screening was positive, (2) had a follow-up plan depression with a standardized tool and, if screening was positive, (2) had a follow-up plan MEASURE: Percentage of patients 12 years of age and older with major depression or dysthymia who reached remission 12 months (+/- 60 days) after an index event Depression Remission at Twelve Months MEASURE: Percentage of children 6 through 9 years of age at moderate to high risk of caries who received a sealant on a first permanent molar Use of Appropriate Medications for Astima MEASURE: Percentage of patients 5 through 64 years of age identified as having persistent asthma and were appropriately ordered medication MEASURE: Percentage of patients 5 through 64 years of age identified as having persistent asthma and were appropriately ordered medication MEASURE: Percentage of patients 5 through 84 years of age who had a diagnosis of hypertension and whose blood pressure was adequately controlled (less than 140/90 Measure: Percentage of patients 18 through 85 years of age who had a diagnosis of hypertension and whose blood pressure was adequately controlled (less than 140/90 Measure) MEASURE: Percentage of patients 18 through 75 years of age with diabetes who had hemoglobin A1 (+lbA1c) greater than 9.0 percent or patients without a test duri						
Screening for colorectal cancer HIPU Linkage to Care MEASURE: Percentage of patients 12 years of age and older with major depression or dysthymia who reached remission 12 months (+/- 60 days) after an index event MEASURE: Percentage of patients 12 years of age at moderate to high risk of cardies who received a sealant on a first permanent molar MEASURE: Percentage of patients 15 through 65 years of age at moderate to high risk of cardies who received a sealant on a first permanent molar MEASURE: Percentage of patients 12 years of age and older with major depression or dysthymia who reached remission 12 months (+/-60 days) after an index event MEASURE: Percentage of children between 6-9 Years MEASURE: Percentage of children between 6-9 Years MEASURE: Percentage of patients 12 years of age at moderate to high risk of cardies who received a sealant on a first permanent molar MEASURE: Percentage of patients of through 9 years of age at moderate to high risk of cardies who received a sealant on a first permanent molar MEASURE: Percentage of patients 5 through 64 years of age identified as having persistent as through 64 years of age identified as having persistent was decived a sealant and a first permanent molar MEASURE: Percentage of patients 5 through 64 years of age identified as having persistent was decived a sealant and a first permanent molar MEASURE: Percentage of patients 5 through 64 years of age identified as having persistent was decived a sealant and a first permanent molar MEASURE: Percentage of patients 18 through 55 years of age who had a diagnosis of hypertension and whose blood pressure was adequately controlled (less than 140/90 fe4.6% fe4.2% fe4.0% fe4.3% fe1.0% mmHg) during the measurement period. MEASURE: Percentage of patients 18 through 75 years of age with diabetes who had hemoglobin A1c (HbA1c) greater than 9.0 percent or patients without a test during the was decived and a 43.8% feared and a 43.8% feared and a 44.8% feared and a 44.8% feared and a 45.0% fe4.8% fe4.8% fe4.8% f		T			1	
screening for colorectal cancer		45.6%	45.6%	24.4%	33.5%	33.0%
MEASURE: Percentage of patients whose first ever HIV diagnosis was made by health center staff within 90 days (30 days in 2020) of that first-ever diagnosis HIV Screening MEASURE: Percentage of patients 15 through 65 years of age who were tested for HIV when within age range MEASURE: Percentage of patients 12 years of age and older who were (1) screened for depression with a standardized tool and, if screening was positive, (2) had a follow-up plan documented Depression Remission at Twelve Months MEASURE: Percentage of patients 12 years of age and older with major depression or dysthymia who reached remission 12 months (+/- 60 days) after an index event MEASURE: Percentage of children 6 through 9 years of age at moderate to high risk of caries who received a sealant on a first permanent molar Use of Appropriate Medications for Asthma MEASURE: Percentage of patients 5 through 64 years of age identified as having persistent asthma and were appropriately ordered medication Low Birth Weight MEASURE: Percentage of babies of health center prenatal care patients born whose birth weight was below normal (less than 2,500 grams). Controlled Hypertension MEASURE: Percentage of patients 18 through 85 years of age who had a diagnosis of hypertension and whose blood pressure was adequately controlled (less than 140/90 mmHg) during the measurement period. MEASURE: Percentage of patients 18 through 85 years of age who had a diagnosis of hypertension and whose blood pressure was adequately controlled (less than 140/90 mmHg) during the measurement period. MEASURE: Percentage of patients 18 through 75 years of age with diabetes who had hemoglobin A1c (HbA1c) greater than 9.0 percent or patients without a test during the 32.0% 32.9% 34.7% 34.8%						
center staff within 90 days (30 days in 2020) of that first-ever diagnosis ##IV Screening MEASURE: Percentage of patients 15 through 65 years of age who were tested for HIV when within age range Preventive Care and Screening: Screening for Depression and Follow-Up Plan MEASURE: Percentage of patients 12 years of age and older who were (1) screened for depression with a standardized tool and, if screening was positive, (2) had a follow-up plan documented Depression Remission at Twelve Months MEASURE: Percentage of patients 12 years of age and older with major depression or dysthymia who reached remission 12 months (+/- 60 days) after an index event Dental Sealants for Children between 6-9 Years MEASURE: Percentage of children 6 through 9 years of age at moderate to high risk of caries who received a sealant on a first permanent molar Use of Appropriate Medications for Asthma MEASURE: Percentage of patients 5 through 64 years of age identified as having persistent asthma and were appropriately ordered medication MEASURE: Percentage of babies of health center prenatal care patients born whose birth weight was below normal (less than 2,500 grams). MEASURE: Percentage of patients 18 through 85 years of age who had a diagnosis of hypertension and whose blood pressure was adequately controlled (less than 140/90 fal. 64.6% fal. 64.0% fal. 64.3% fal. 61.0% mmHg) during the measurement period. MEASURE: Percentage of patients 18 through 75 years of age with diabetes who had hemoglobin A1c (HbA1c) greater than 9.0 percent or patients without a test during the description and whose blood pressure was adequately controlled these than 140/90 greater than 9.0 percent or patients without a test during the description and whose blood pressure was adequately controlled these who had hemoglobin A1c (HbA1c) greater than 9.0 percent or patients without a test during the	-	T
